Study: **The Internet Helps You Make More Friends, Be More Social**

Source 1: Newspaper Article

Part 1: Read Sources

...online Americans tend to have 664 [social] ties on average, compared with an offline average of around 506.

The study even looked into the number of social ties internet
20 users and non-internet users have, and found that online Americans tend to have 664 ties on average, compared with an offline average of around 506. That number goes crazy when you start to plug in different social networks, however: Facebook users average 648 social ties, but Twitter users have an average of 838.

So, the next time someone says that they think the internet is bad for society, the answer is clear: Sign them up for Twitter, and see how they feel a couple of weeks later.

NOTES

the study shows that online users have more social ties than non-internet users. This is true for both Facebook and Twitter users. However, the average number of social ties for Facebook users is lower than for Twitter users.

20 The Lie of Opportunity

How do we justify this? How do we convince ourselves that slicing our attention so thin the turkey becomes translucent is a good idea?

We do it because we believe that more relationships provides more opportunity.

"It's not what you know, it's who you know."

"Social media makes a big world smaller."

"Linkedin is for people you know, Facebook is for people you used to know, Twitter is for people you want to know."

30 All of these chestnuts are passed around like a flu strain because they make intuitive sense. But common among them is the **underlying premise that interacting with more people is inherently better than interacting with fewer people.** I have always believed this to be true, and in fact have delivered the lines above in presentations and on this blog. But today, I'm no longer convinced.

Instead I wonder, what if we have it ALL wrong?

I recognize this is not purely an either/or scenario, and relationships that began with a Twitter exchange or series of blog comments can flourish into treasured real-world ties.

40 But those situations where we "meet" someone through social media, have the opportunity to interact in real life, and then develop a relationship that creates true friendship are few and far between.

And as social media gets bigger and more pervasive, this chasm becomes even more difficult to cross. As my own networks in social media have gotten larger, I've ended up talking about my personal life less, because a large percentage of that group don't know me, or my wife, or my kids, or my town, or my interests. I don't want to bore people with the inanities of the everyday. (Facebook is the one exception, as I've always kept my personal account relatively small).

50 To some degree, I think this explains the popularity of Google + among people with very large followings on Twitter and/or Facebook. Google + provides a chance for a do-over, to create a new group of connections that are more carefully cultivated.

NOTES

NOTES

But that's just medicating the symptoms, not curing the disease. Fundamentally, technology and our use of it isn't—as we've all hoped—bringing us closer together. In fact, it may be driving us farther apart, as we know more and more people, but know less and less about each of them.

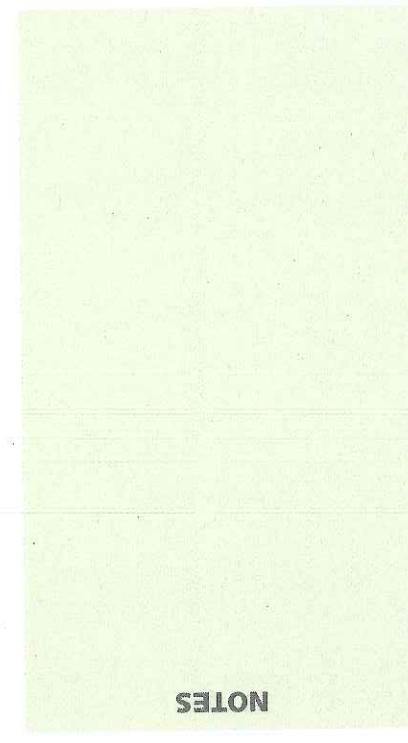

Making Friends Out of Connections

Maybe we should be focused less on making a lot of connections, and focused more on making a few real friends? I'm going to try to work on this, to identify people with whom I want to develop real friendships, and make a concerted effort to do so, even if it means answering fewer tweets and blog comments from a much larger group of casual connections.

We have to take at least some of these social media spawned relationships to the next level, otherwise what's the point beyond generating clicks and newsletter subscribers?

You think you know someone, but you don't. And that's social media's fault. But more so, our own.

Making Friends Through The Internet

Advantages and disadvantages of meeting friends online

by Sally Arthur

Meeting friends on the Internet can have its advantages and disadvantages. There are a number of factors to consider.

Meeting friends online can happen more quickly than it might happen offline. You can even become friends with someone who lives in a different part of the world.

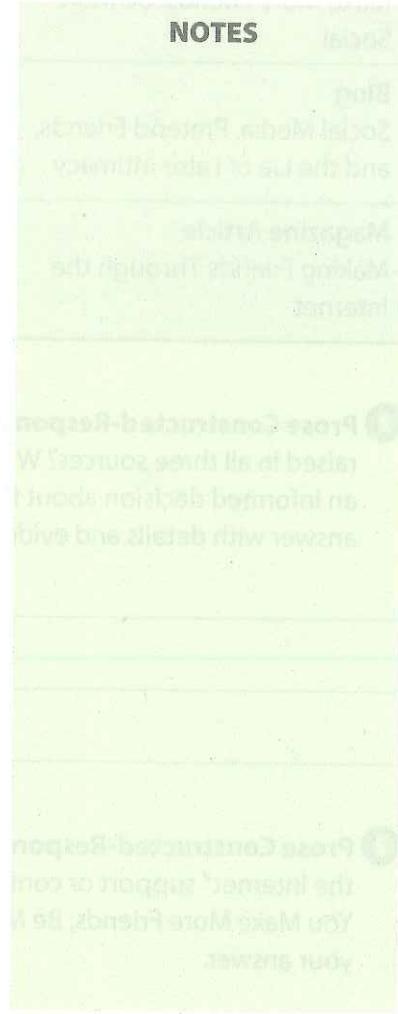

You can remain anonymous on the Internet. You do not have to share information about where you live, how old you are, or any personal details about your life. Online, you can be whoever you want to be, or just be yourself. This allows people to practice their social skills in an anonymous setting.

One major disadvantage of making friends online is that you do not always know if people are who they say they are. Just as it can be a good thing to be anonymous to protect your safety and personal information, anonymity can be dangerous, too. If you are dealing with someone who is not forthcoming about their identity, you don't know his or her motive for doing so.

Making friends online also may prevent people from socializing outside of the Internet. While having friends online is a good way to find people with similar interests, friends who exist only on a computer screen do not provide the companionship necessary to sustain friendships. If having Internet friends comes at the cost of neglecting friends offline, the Internet becomes a disadvantage.

While there are advantages and disadvantages to meeting friends online, it is up to every individual to use discretion and be safe.

NOTES

Discuss and Decide

Reviewing the advantages and disadvantages Arthur lists, do you have a sense of her bias? Explain your thinking, citing evidence from the text.

These questions will help you analyze the sources you've read. Use your notes and refer back to the sources to answer the questions. Your answers to these questions will help you write your essay.

Respond to Questions on Step 3 Sources

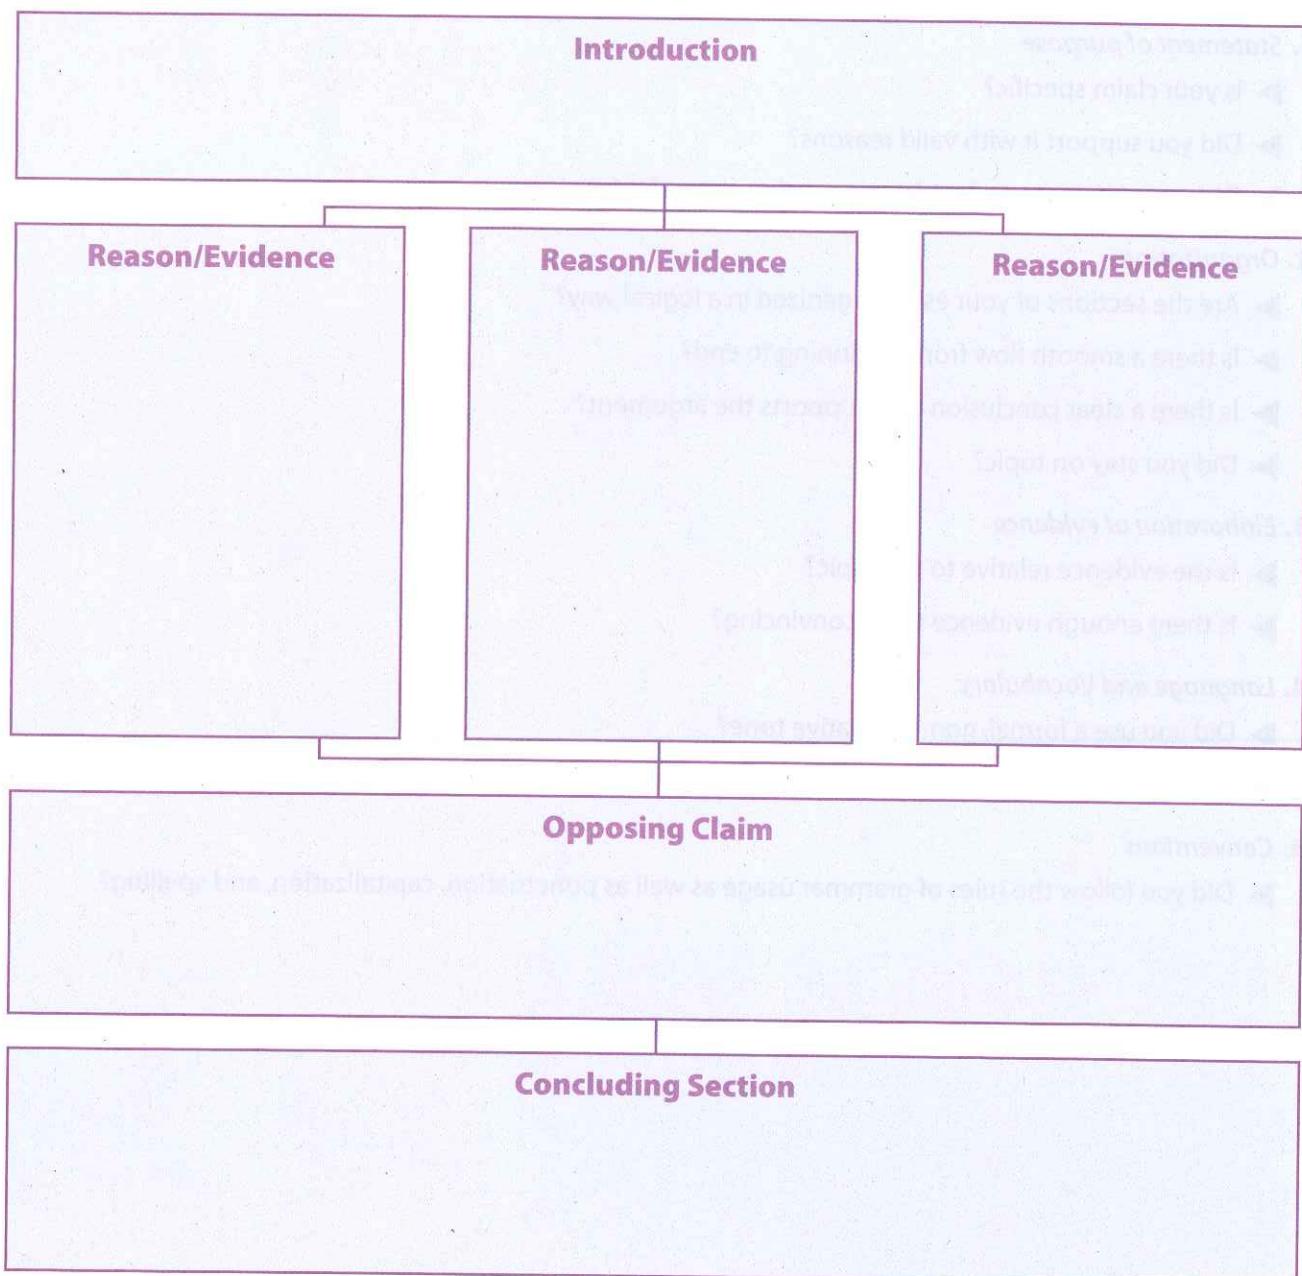

Part 2: Write

ASSIGNMENT

You have read about making friends online. Now write an argumentative essay explaining why you agree or disagree with the idea that you can make real friends on the Internet. Support your claim with details from what you have read.

Plan

Use the graphic organizer to help you outline the structure of your argumentative essay.

- Evaluation Criteria**
- Your teacher will be looking for:
- 1. Statement of purpose
 - Did you support it with valid reasons?
 - Is your claim specific?
 - Did you anticipate and address opposing claims fairly?
 - Are the sections of your essay organized in a logical way?
 - Is there a smooth flow from beginning to end?
 - Is there a clear conclusion that supports the argument?
 - Did you stay on topic?
 - 2. Organization
 - Is the evidence relative to the topic?
 - Is there enough evidence to be convincing?
 - 4. Language and Vocabulary
 - Did you use a formal, non-combative tone?
 - Did you use vocabulary familiar to your audience?
 - Did you follow the rules of grammar usage as well as punctuation, capitalization, and spelling?
 - 5. Conventions
 - Is there enough evidence to be convincing?

Look back over your essay and compare it to the Evaluation Criteria. Revise your essay and edit it to correct spelling, grammar, and punctuation errors.

Revise and Edit

Use your notes and completed graphic organizer to write a first draft of your argumentative essay.
